

# Care coordination

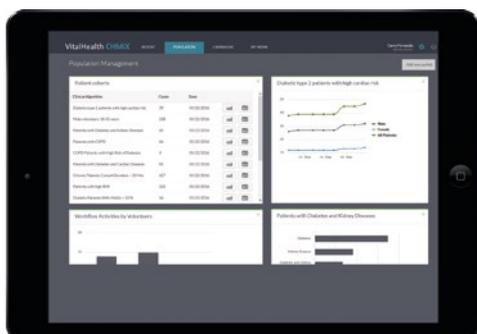

Care management of chronic disease patients across geographical and specialty boundaries

Around the world, the cost and effort required to care for chronic disease patients is growing. It is forcing health care systems and healthcare providers to deliver care in new and innovative ways to reduce costs. Good communication with patients and between providers is a prerequisite to achieving better outcomes at lower costs. Improving care coordination can help reduce unnecessary, redundant test ordering, ensure timely review of data and engage patients more actively in their own health management and general well-being.

## Coordinating care across the care continuum

Philips VitalHealth offers solutions to enable Care Coordination. Solutions enable integrated collaboration and communication across multi-disciplinary care teams, with the aim of achieving more effective, timely and more transparent care for patients. We strive to achieve this through collaboration on shared care plans and automated

exchange of patient health and treatment data amongst a mixture of Electronic Medical Records (EMRs). In addition, we add care protocol based treatment recommendations, health alerts and reminders. With embedded decision support functionality, care givers have the opportunity to efficiently provide optimized patient care across the care continuum.

## Advantages of Coordinate

- Configurable dashboards.
- Individualized and best practice-based care pathways.
- Personalized care plans.
- Clinical decision support based on medical guidelines.
- Multidisciplinary and role-based access.
- Integrations with a diverse mixture of EMRs.

## Manage chronic conditions

Coordinate enables management of care for patients diagnosed with one or more chronic conditions. It includes disease specific content – such as care pathways and clinical decision support – for common chronic conditions. Individualized care plans include role-based assignment of tasks, protocol-driven

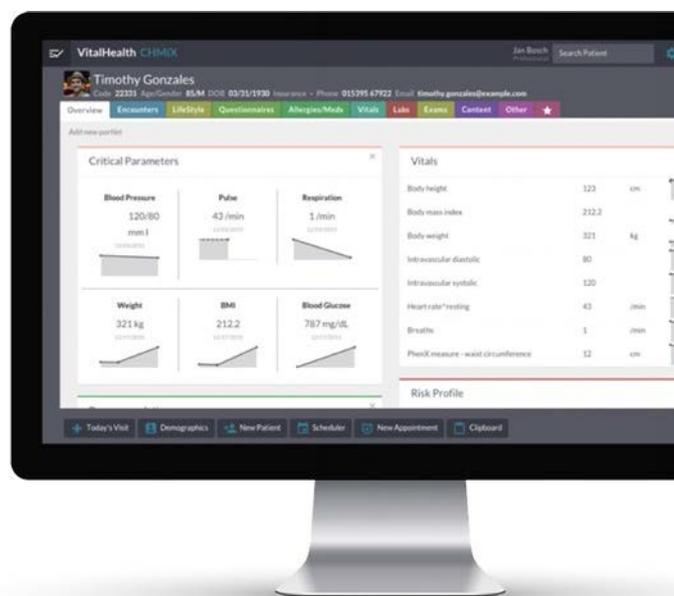

recommendations for treatment and automated monitoring of treatment progress, where necessary resulting in configurable reminders. Coordinate not only spans the entire care team, but also includes the patients in the care process, to enable and stimulate them to actively participate in their own care process.

**“The CVRM module provided by Philips VitalHealth is a user-friendly solution that not only registers all indicators accurately but also provides support in decision-making with regard to additional exams and treatment according to current guidelines.”**

**Ms. M. Hollander**, internal consultant and executive heart and vascular physician for Leidsche Rijn Julius Health Clinics

## Solutions for actionable population health management

Philips VitalHealth offers a suite of cloud-based software solutions for Population Health Management: Care Coordination, Outcome Measurement Patient, Engagement and Healthcare Analytics. Philips VitalHealth developed all software solutions based on best practices and with a focus on ease of use and can be implemented either standalone or integrated. In addition, all Philips VitalHealth solutions share the same underlying platform, which enables integration and data sharing amongst various healthcare functions. This helps value based health networks to provide personalized care collaboration across the care continuum.

## Solutions for actionable population health management

Philips VitalHealth offers a suite of market leading cloud-based software solutions for population health management: care coordination, Outcome measurement, patient engagement and health care analytics. All software solutions are based on best practices – with a focus on ease of use – and can be implemented either standalone or integrated. In addition, all Philips VitalHealth solutions share the same underlying platform, which allows integration and data sharing amongst various health care functions. This enables value based health networks to provide personalized care collaboration across the care continuum.
