

Looking back at a successful Jet-Net ExperienceDay 2017

Published: February 15th 2017

On Tuesday, February 14, the Jet-Net team hosted the 13th edition of 'ExperienceDay' at the High Tech Campus in Eindhoven. Started in 2004 as a small event, the event has now grown into a full-sized, very successful Jet-Net activity.

This year, 110 third-year students (age 15-16) from HAVO/VWO schools in the Netherlands participated. In this third year, the students choose the subject that they will take their exam in. So this is the moment that we can make them aware that technology can be fun, interesting and educational.

Numerous colleagues from Research, Design, PInS and IP&S groups (e.g. Thermal, Dynamics, Thermal & Control, Personal Health, Precision & Decentralized Diagnostics, Biochemical Devices & Processes, Personal Care & Wellness, Product & Systems, CoCreate) joined the ExperienceDay to show the students what one can accomplish when working in technology.

During the day, the students, coming from 4 schools in the Eindhoven region, enthusiastically explored a variety of workshops such as Molecular cooking, Chemical kitchen, a visit to the cleanroom, a webcalculator, and many more. The reactions afterwards were – again – very positive.
